

CERTIFICATE OF APPROVAL

No CF 5818

This is to certify that, in accordance with
TS00 General Requirements for Certification of Fire Protection Products
The undermentioned products of

PYROGUARD UK LIMITED

MILLFIELD LANE, HAYDOCK, WA11 9GA, UNITED KINGDOM

TEL: 01942 710720

Have been assessed against the requirements of the Technical Schedule(s)
denoted below and are approved for use subject to the conditions
appended hereto:

CERTIFIED PRODUCT

**'Pyroguard Advance
2-EW, 2-FD and 2-EI'
Fire Resisting Glass**

TECHNICAL SCHEDULE

**TS 25 Fire Resistant Glass,
Glazing Systems and Materials**

Signed and sealed for and on behalf of Warringtonfire Testing and Certification Limited

**Paul Duggan
Certification Manager**

**Issued: 9th October 2021
Revised: 16th September 2025
Valid to: 8th October 2026**

CERTIFICATE No CF 5818

PYROGUARD UK LIMITED

Pyroguard Advance 2-EW, 2-FD and 2-EI Fire Resisting Glass

This certification is provided to the client for their own purposes and we cannot opine on whether it will be accepted by Building Control authorities or any other third parties for any purpose.

This Certificate of Approval relates to the fire resistance of Pyroguard UK Ltd, 'Pyroguard Advance 2-EW, 2-FD and 2-EI' when used in the following applications, as defined in BS 476: Part 22: 1987, using test results achieved against the following standards:

BS 476-20:1987 Part 20: "Method for determination of the fire resistance of elements of construction (general principles)"

BS 476-22:1987: Part 22: "Methods for determination of the fire resistance of non-loadbearing elements of construction"

BS EN 1363-1 "Fire resistance tests - Part 1 General requirements"

BS EN 1364-1 "Fire resistance tests for non-loadbearing elements - Part 1: Walls".

BS EN 1364-3 "Fire resistance tests for non-loadbearing elements - Curtain walling. Full configuration (complete assembly)"

BS EN 1634-1 "Fire resistance and smoke control tests for door and shutter assemblies, openable windows and elements of building hardware Part 1: Fire resistance test for door and shutter assemblies and openable windows".

CERTIFICATE No CF 5818

PYROGUARD UK LIMITED

Pyroguard Advance 2-EW, 2-FD and 2-EI Fire Resisting Glass

This product is approved on the basis of:

- a) Initial type testing
- b) A design appraisal against TS25
- c) Product surveillance under BS EN ISO 9001: 2015
- d) Audit testing

This Certificate of Approval must be read in conjunction with CERTIFIRE Technical Schedule TS25, Fire Resistant Glass, Glazing Systems and Materials.

General Requirements

Where the glass is installed in a timber or steel framed screen, the orientation of the screen shall be no more than $\pm 10^\circ$ from the vertical.

The edge cover to each pane shall be no less than 10mm minimum with an expansion gap in the rebate top and sides no less than 3mm.

Options

- i. Setting blocks: Hardwood and other non-combustible materials may be used. The dimensions may vary in order to centralised and stabilize the glazing within the aperture. It has also been proven that setting blocks may be removed with no detriment to performance provided that sufficient edge cover is provided on all four sides of the glazing.
- ii. Closed cell foam tapes: The closed cell foam glazing tapes listed below, may be used in 30 minute integrity only applications for timber screens and timber doorsets as a replacement for the approved glazing tapes.

Arbo F42
Compriband e TP601
Fire & Acoustic Seals
Scapa 3259
Technibond

- iii. Neutral silicone capping: Where a glazing tape is used it may, optionally, be sealed with a neutral silicone capping. This can only be used on applications where the 2-EW30/7-1 (7mm) glass is utilised for 30 minute applications or the 2-EW60/11-2 (11mm) glass is utilised for 60 minute applications.
- iv. Beads: In cases where flush or square timber beads are tested in doors or partition. Flush timber beads may be converted to chamfered or bolection while maintaining at least the overall tested bead dimension and approved fixing method. Chamfered and bolection beads may only be increased in dimension.
- v. Section: The tested framing sections may be increased but not decreased in dimension.

CERTIFICATE No CF 5818

PYROGUARD UK LIMITED

Pyroguard Advance 2-EW, 2-FD and 2-EI Fire Resisting Glass

- vi. Insulated glass units (IGU, DGU, VI): The orientation of the unit with respect to the fire risk is critical to the fire resistance performance and is specified in this certificate for each application.

The approved insulated glass units may be modified in the following ways:

Counterpanes may be selected from the following list:

Annealed glass
Laminated glass (counterpane to the fire side only unless stated otherwise)
Low E glass
Obscured glass
Patterned glass
Solar Control glass
Toughened glass
'PassivGlas' vacuum glass.

Spacers may be of dimensions 6-20 mm.

Spacers materials may be selected from the listed types:

Aluminium
Stainless steel
Steel
Technoform Mww SP14 [Warm Edge]

Seal materials may be selected from types:

Hot-melt butyl
Polyurethane
Polysulphide
Silicone

Integral Blinds: Insulating Glass Units (IGUs) may also have an integrated blind within the airspace provided the Pyroguard glass pane is glazed on the non-fire side when combined with a non-fire rated laminated glass or either side when combined with a float or toughened glass.

- vii. Decorative: All systems may include decorative self-adhesive leading or plant-on beads on either or both faces or may be frosted or patterned on one face.
- viii. Application of films: The glass may have 3M – Ultra 400 clear or Llumar Window Film SCL SR PS4 applied to either face or an alternative film applied to the known fire risk side only. If the fire risk may be from either side or it cannot be determined which side of the glass will be on the fire risk side, then films other than 3M – Ultra 400 clear or Llumar Window Film SCL SR PS4 shall not be applied.

PYROGUARD UK LIMITED

Pyroguard Advance 2-EW, 2-FD and 2-EI Fire Resisting Glass

- ix. Obscured: Pyroguard Advance 2 glass may be sandblasted, acid etched, bevelled or incorporate grooves subject to the minimum glass thickness being maintained i.e. by utilising thicker glass sheets bevelled at the edge or grooved to standard thickness. Switchable privacy application may also be achieved by lamination using Priva-see film. This shall be limited to the FR glass oriented to the unexposed face only. The manufacturer shall be consulted where this is required.
- x. Shapes: It is acceptable to include Pyroguard Advance 2-EW, 2-FD and 2-EI in shaped apertures, i.e. circles, ovals, arches, quadrants, etc. within timber door leaves or screens (subject to limitations in the framing systems). For rectilinear apertures angles between adjoining perimeter beads should not be less than 45°. Where shaped apertures are included, only finger jointed glazing beads are acceptable. Maximum linear dimensions or areas as approved should not be exceeded.
- xi. Glazing: Glazing may be substituted for other, thicker, glazing from the same product family. For example, 2-EW30/7-1 may be substituted by 8-1, 9-1, 11-1 etc, provided that the minimum bead dimensions are respected and that there is no reduction in the thickness of the interlayer component.
- xii. Where multiple panes are approved for use within a single door leaf, the certificate holder should be contacted in regards minimum spacing requirements and further restrictions.

Pyroguard Advance 2-EW60/11-2 glass in timber framed screens for periods of 60 minutes integrity

For this application the following conditions shall apply:

The glass shall be glazed within a previously fire tested or CERTIFIRE approved framing system utilising the following basic specification:

	Ⓐ Glazing: Pyroguard 2-EW60/11-2 (11 mm thick). Ⓑ Glazing tape: Pyroglaze 60 24 mm x 2.5 mm. [Mann McGowan] Ⓒ Fixings: 16 swg x 50 mm pins at 50 mm from corners, maximum 150 mm centres. Ⓓ Beads: Hardwood $\geq 640 \text{ kg/m}^3$ $\geq 30 \text{ mm}$ wide x $\geq 26 \text{ mm}$ deep, with 15° chamfer. Ⓔ Section: Hardwood $\geq 640 \text{ kg/m}^3$ $\geq 110 \text{ mm}$ wide x $\geq 32 \text{ mm}$ high. Ⓕ Setting Blocks: 80 mm x 30 mm x 2 mm – hardwood or non-combustible material. Glazing details as described in test report: Warringtonfire WF531980
--	---

This Certificate of Approval relates to the sizes of Pyroguard Advance 2-EW60/11-2 glass shown in the table below, when used in conjunction with the above system. The aspect ratio of the glass may be unlimited within these aperture dimensions.

Maximum Permitted Glass Dimensions

Maximum Width	Maximum Height	Maximum Area

Glazing Arrangements

Pyroguard Advance 2-EW30/7-1 glass in timber based doorsets for periods of 30 minutes integrity (cont.)

Glazing Arrangements

(1)	The glazing beads shall be of Sapele, or equivalent or higher density (610 kg/m ³), sections, 22mm wide by 21mm high, chamfered by approximately 13° and fixed using 1.5mm diameter, 50mm long steel pins at a maximum of 100mm centres and angled to pass under the face of the glass.
(2)	The glazing beads shall be hardwood of minimum density 550 kg/m ³ or MDF of minimum 750 kg/m ³ density, sections, 22mm wide by 15mm high with a 5mm by 5mm bolection return, chamfered by approximately 15° and fixed using 1.5mm diameter, 40mm long steel pins or screws at a maximum of 150mm centres and angled to pass under the face of the glass. A secondary hardwood liner (integral or separate) or an LX4402 intumescent liner shall be used to line apertures cut within flaxboard substrates.
(3)	The glazing beads shall be of minimum density 550 kg/m ³ , sections, 22mm wide by 13mm high, chamfered by approximately 15° and fixed using 1.5mm diameter, 40mm long steel pins or screws at a maximum of 200mm centres and angled to pass under the face of the glass. A secondary Palusol based intumescent material is required to be used as a lining around the perimeter of apertures cut within flaxboard substrates which have a density below 500 kg/m ³ .
(4)	The glazing beads shall be of minimum density 630 kg/m ³ , sections, 20mm wide by 14.5mm high with a 5mm by 5mm bolection return, chamfered by approximately 20° and fixed using, 50mm long steel screws at a maximum of 150mm centres and angled at 30-45°. A secondary 6mm thick hardwood liner (min. density 630 kg/m ³) shall be used to line apertures cut within all substrates.
(5)	The glazing beads shall be of minimum density 630 kg/m ³ , sections, 20mm wide by 14.5mm high with a 5mm by 5mm bolection return, chamfered by approximately 20° and fixed using, 50mm long steel screws at a maximum of 150mm centres and angled at 30-45°. A secondary 6mm thick hardwood liner (min. density 630 kg/m ³) shall be used to line apertures cut within all substrates.
(6)	The glazing beads shall be of minimum density 630 kg/m ³ , sections, 20mm wide by 14.5mm high with a 5mm by 5mm bolection return, chamfered by approximately 20° and fixed using, 45mm long steel screws at a maximum of 150mm centres and angled at 30-45°.
(7)	The glazing beads shall be hardwood of minimum density 500 kg/m ³ , sections, 25mm wide by 23mm high with a 5mm by 5mm bolection return, chamfered by approximately 15° and fixed using, 38mm long steel pins or screws at a maximum of 150mm vertical and 100mm horizontal centres and angled at 15°. A secondary 6mm thick hardwood liner (min. density 500 kg/m ³) shall be used to line apertures cut within all substrates.
(8)	Asymmetrical beading system as shown in Pyroguard UK Ltd Drawing no. G20011-01 (01/07/04)
(9)	The glazing beads shall be Sapele hardwood of minimum density 610 kg/m ³ , sections, 20mm wide by 21mm high with a 5mm by 5mm bolection return, chamfered by approximately 21° and fixed using, 50mm long steel pins or screws at nominally 70mm at corners and a maximum of 200mm centres and angled at 45° to glass.
(10)	The glazing beads shall be hardwood of minimum density 650 kg/m ³ , sections, 16.5mm wide by 25mm high with a 5mm by 5mm bolection return, chamfered by approximately 15° and fixed using, 40mm long steel pins or screws at a maximum of 150mm centres and angled at 30°. A secondary 6mm thick hardwood liner (min. density 500 kg/m ³) shall be used to line apertures cut within all substrates.

CERTIFICATE No CF 5818 PYROGUARD UK LIMITED

Pyroguard Advance 2-EW30/7-1 glass in timber based doorsets for periods of 30 minutes integrity (cont.)

Glazing Arrangements cont.

(11)	The glazing beads shall be Sapele hardwood, or equivalent or higher density (610 kg/m^3) sections, 15.5mm wide by 20mm high with a 5mm by 5mm bolection return, chamfered by approximately 21° and fixed using, 50mm long steel pins or screws at nominally 70mm at corners and a maximum of 200mm centres and angled at 45° to glass.
(12)	The glazing beads shall be MDF, minimum density 700 kg/m^3 , 20mm wide by 25mm high including a 4.5mm wide by 10mm high bolection return, chamfered at 15° to the glass. Beads were fixed using 2.0mm diameter, 50mm long steel pins equally spaced at a maximum of 150mm centres (vertical beads) and 230mm centres (horizontal beads) angled at 30° to the MDF beads. A 15mm by 3mm closed cell foam tape (Technibond) was located between the glass and beads. An intumescent acrylic sealant can optionally be applied around the perimeter of the glass. An MDF or hardwood liner, minimum density 700 kg/m^3 shall be used to line apertures cut within all substrates.
(13)	Morland QuickFix FD30 Glazing Bead system (comprising bead and glazing gasket), 50mm long steel pins at 150mm max. centres (30o to vertical bead edge), Intumescent Acrylic Sealant under perimeter edge of glass. Core incorporating voids or hollow tubes should not be glazed using this system unless a 6mm hardwood aperture liner is fitted within the perimeter of the aperture (CF5241 must be consulted for full details of this system).
(14)	Sealmaster Intumescent Foam Glazing Tape, $\varnothing 1.6 \times 40$ mm long steel pins or No.8x40mm long screws at 150max. centres and 50mm from corners (fixed at 45°), 15mm high beads, with a 5x5mm min. bolection, from softwood or hardwood (min. density 510 kg/m^3 with a 20° chamfer) or MDF (min. density 700 kg/m^3 with a 15° chamfer). System may be used with and without non-combustible setting blocks.
(15)	Sealmaster Intumescent Foam Glazing Tape, $\varnothing 1.6 \times 40$ mm long steel pins or No.8x40mm long screws at 150max. centres and 50mm from corners (fixed at 45°), 15mm high beads, with a 5x5mm min. bolection, from hardwood (min. density 620 kg/m^3 with a 20° chamfer). System may be used with and without non-combustible setting blocks.
(16)	Sealmaster Intumescent Foam Glazing Tape, beads 21mm by 20mm including a 5mm by 5.5mm bolection in 640 kg/m^3 hardwood secured using 16 gauge by 40mm steel pins at 150mm max. centres, 50mm from corners, at 30° relative to the glass. System may be used with and without non-combustible setting blocks.
(17)	The glazing beads shall be hardwood $\geq 640 \text{ kg/m}^3 \geq 15 \text{ mm wide} \times \geq 15 \text{ mm deep}$ with optional 3 mm x 3 mm shadow gap. Alternative bead may be approved based on TS25 rules. Flush beads may be converted to chamfered or bolection while maintaining at least the overall tested bead dimensions and approved fixing method.
(18)	The glazing beads shall be hardwood $\geq 600 \text{ kg/m}^3$, $\geq 21 \text{ mm wide} \times \geq 20 \text{ mm deep}$ including a $\geq 5 \times \geq 5 \text{ mm}$ bolection and 15° chamfer.

Pyroguard Advance 2-FD60/7-1 glass in timber based doorsets for periods of 60 minutes integrity

For this application the following conditions shall apply:

The glass shall be glazed within a previously fire tested or CERTIFIRE approved timber based doorset utilising the following basic specification:

- (A) Glazing: Pyroguard 2-FD60//7-1 (7mm thick)
- (B) Glazing tape : Fire and acoustic closed cell foam tape 10 x 2.0mm.
- (C) Fixing: 50 mm pins. 50 mm from corners, maximum 200 mm centres.
- (D) Bead: Hardwood glazing beads, ≥ 640 kg/m³. ≥ 22 mm wide x ≥ 13 mm deep including an optional a 2 mm x 2mm shadow gap.

Alternative bead may be approved based on TS25 rules. Square beads may be converted to chamfered while maintaining at least the overall tested bead dimensions and approved fixing method.

- (E) Liner: Thermaline liner [ISL] 44 mm x 2 mm rebated into a 54mm x 6 mm hardwood liner.
- (F) Leaf: Nominally 54 mm thick previously tested or Certifire approved FD60 door.
