Pyroguard and Ottostumm achieve new success with extended solutions for partition walls

OTTOSTUMM

We've recently expanded our test evidence with Pyroguard Protect and metal house, Ottostumm to provide new solutions for partition walls in steel applications.

Warringtonfire have approved the Ottostumm W40 FR steel system with the following features:

- Approved dimensions: up to 3.5 m high partition of unrestricted width
- Glazing: up to 1562 mm x 3473 mm (<math><4.56\text{ m}^2</math>) pane size
- Framing system: Ottostumm W40 FR

This is the first time Pyroguard's fire safety glass has been successfully tested in the Ottostumm W40 FR partition system to EW30, EW60, EW90 and EW120 and we're proud to confirm it comfortably met the target requirements providing greater flexibility and opening up new possibilities for partition walls.

Ottostumm's slimline system W40 FR combined with Pyroguard's fire safety glass means building safety does not need to be compromised when looking for contemporary aesthetics.
