Pyroguard Infinity achieves new test success with extended solutions for fully glazed walls

In response to market demand, we've recently expanded our test evidence with Pyroguard Infinity to provide even more fire safe solutions for partition walls in steel applications.

Having successfully tested for the first time, we can now provide you with a new range of certified steel solutions that meet an EI30 fire rating in a plasterboard wall support structure and in our structural wall system glass for IGU constructions.

IGU options and alternative support structures are often overlooked when planning tests. However, thanks to our independence and ability to respond quickly to bespoke project requirements means that there's no need to compromise aesthetics with fire performance.

Authorised and approved by Efectis France, the range covers the following extended scope:

Construction type: Partition walls

Fire ratings: EI30

Glass types: Pyroguard T-EI30/32-2 SWS VI (largest pane size: 2045 mm x 2870 mm)

Frame: Various steel applications

Support structure: 98/48 plasterboard wall
